SUMMARY

10+ years in Java backend development, most recently on the Automic Automation Platform at Broadcom. Shipped production features end-to-end, led a cross-module API test migration, and built an AI-powered on-call prototype that cut report lookup time in half. Previous roles in healthcare imaging (MedUni Vienna) and high-volume e-commerce (Dodax). Work style shaped by SAFe PI planning, on-call rotations, and cross-team code reviews.

- Led the Java API test migration across Automation Engine modules. Also designed and shipped several REST API features on the Engine core.
- Day-to-day: SaaS feature work, cross-team PR reviews, on-call customer escalations, E2E and regression testing with Robot Framework.
