Bitpanda GmbH
Vienna, Austria

17 June 2026

Dear Hiring Team,

I am applying for the Senior Software Engineer, Java (Trade Hub) position at Bitpanda. With 10+ years of Java backend engineering across enterprise SaaS, e-commerce, and healthcare platforms, I am drawn to the opportunity to build critical trading infrastructure for one of Europe's leading fintechs.

In my current role at Broadcom, I engineer core features on the Automic Automation Engine — a globally deployed, high-availability SaaS platform. Key highlights directly relevant to Trade Hub:

- Designed and shipped a REST endpoint from hackathon prototype to production, improving report analysis efficiency by 50% — demonstrating end-to-end ownership from design to SaaS release.
- Led the Java API test migration across the Automation Engine, driving systematic replacement of legacy tests with maintainable Java API tests — the same 80%+ coverage discipline Bitpanda values.
- Delivered multiple REST API features on the Automation Engine, with hands-on experience in Docker, Kubernetes, Jenkins CI/CD, PostgreSQL, and AWS SQS for event-driven integration.
- Mentored a junior developer at Medical University of Vienna — covering onboarding, tooling, and independent contribution — directly matching the junior mentorship responsibility in this role.

At Dodax, I built and maintained Spring Boot microservices handling millions of products and customers, achieving 80% test coverage — the reliability and throughput discipline that trading infrastructure demands. I actively use Claude Code, Google Gemini, and Cursor in daily engineering work.

I would welcome the opportunity to discuss how my background in scalable Java platform engineering maps to the Trade Hub team's goals.

Warm regards,

Meenakshi Subudhi
