Bitpanda GmbH
Vienna, Austria

18 June 2026

Dear Hiring Team,

I am applying for the Senior Software Engineer, Java (Ops Hub) position at Bitpanda. The combination of payments infrastructure, compliance, and risk engineering — built to fintech reliability standards — is exactly the kind of high-stakes, high-ownership Java work I am looking for.

My experience maps directly to the Ops Hub's core requirements:

- 80% test coverage: At Dodax, I established 80% unit and integration test coverage across the service application from the ground up — the same standard Bitpanda enforces. At Medical University of Vienna, I grew coverage from 0% to 50%+ within a year using JUnit and Mockito.
- Payments and order infrastructure: At Dodax, I maintained and enhanced Spring Boot microservices spanning order processing, vendor management, and third-party integrations — using AWS SQS for event-driven integration. While not payment rails directly, the reliability and correctness demands are directly comparable.
- Cross-functional collaboration: At Broadcom, I work across engineering, customer support, and enablement teams under SAFe, participating in PI Planning with stakeholders from multiple domains — the same pattern as the Ops Hub's collaboration across Payments, Compliance, Fraud, and Finance.
- Mentoring: I onboarded and mentored a junior developer at Medical University of Vienna, covering codebase structure, tooling, and independent contribution — matching the junior mentorship responsibility in this role.

I actively use Claude Code, Google Gemini, and Cursor in my daily engineering work, and hold an IBM Prompt Engineering certification. I am comfortable with Kafka as an evolution from AWS SQS event-driven patterns.

I would welcome the chance to discuss how my background in reliable Java service engineering translates to the Ops Hub's mission.

Warm regards,

Meenakshi Subudhi
