**Roche / mySugr GmbH**  
Vienna, Austria

19 June 2026

Dear Hiring Team,

I am applying for the Senior Software Engineer Backend position at mySugr. Building software that directly improves health outcomes is meaningful work — and I bring both the technical background and the domain experience to contribute from day one.

Two aspects of my background map directly to the navify Platform Engineering team:

- Healthcare software engineering: I spent three years delivering production Java software on Octavo, a medical imaging diagnosis platform in clinical use at the Medical University of Vienna — working to the correctness and reliability standards that regulated healthcare software demands. Earlier, at TCS, I delivered frontend and backend features for a GE Healthcare PLM platform. Medical software is not new territory for me.
- AI/LLM backend integration: At Broadcom, I built an AI-powered on-call support service integrating Google Gemini and NotebookLM into a production SaaS backend — hands-on AI/LLM service engineering, not just tooling use. I hold an IBM Prompt Engineering certification and actively use Claude Code and Cursor in daily engineering work.

On the Java and quality side: I have 10+ years of Java backend engineering (latest: Java 17, Spring Boot), have led a test migration that brought maintainable coverage to a globally deployed SaaS platform, and grew test coverage from zero to 50%+ in a healthcare codebase within one year. Clean code and solid technical design are values I already work to, not aspirational targets.

One honest gap: I have not worked directly with OpenID Connect or Keycloak. I am familiar with the concepts through enterprise authentication integrations at Broadcom and am confident I can close this gap quickly.

I would be glad to discuss how my background fits the navify Platform Engineering chapter's goals.

Warm regards,

Meenakshi Subudhi
