Meenakshi Subudhi

Senior Java Engineer | REST APIs · Backend Systems · Java 17 |
Broadcom (Automic Automation) | AI Tooling | Open to Senior SWE
& Tech Lead Roles

Vienna, Austria

Summary

I build backend systems that scale — and I care as much about why we build as how we build. 10+ years of Java engineering across enterprise workload automation (Broadcom), healthcare imaging (Medical University of Vienna), and e-commerce (Dodax). Currently contributing to Automic Automation — Broadcom's global SaaS workload automation platform. Beyond writing code, I take ownership end-to-end: → Independently built and shipped a hackathon REST feature (50% efficiency gain) into production → Took technical lead on the Java API test migration across the Automation Engine → Built an AI-powered on-call support assistant using Google Gemini and NotebookLM → Conduct cross-team PR reviews, present sprint demos, and handle direct customer escalations on-call → Onboarded and mentored a junior developer at Medical University of Vienna. What I bring beyond the code: - End-to-end delivery ownership — from idea to production - Cross-functional collaboration — engineering, UX, product, and customers - AI tooling literacy — actively applying Gemini, NotebookLM, and Cursor in daily work - Agile fluency — Scrum, Kanban, sprint planning, grooming, standup facilitation - People development — onboarding, mentoring, cross-team code reviews. Currently exploring Senior Software Engineer, Tech Lead, and AI-adjacent roles in Vienna or remote across Europe. Open to conversations. Always happy to connect. — Tech: Java 8/11/17 · REST APIs · Sprint Boot. Docker · Jenkins · Robot Framework · PostgreSQL · Ms SQL. Oracle

Experience

Broadcom Software

R&D Engineer Software 3

July 2022 - Present (4 years)

Vienna, Austria

Product: Automic Automation — Enterprise Workload Automation Platform

- Built an AI-powered on-call support assistant using Google Gemini and NotebookLM to enable fast contextual query resolution prototype.
- Designed and implemented a context-based report search REST endpoint (50% efficiency improvement); independently developed as a hackathon project and integrated into production.
- Took lead on Java API test migration across the Automation Engine.
- Delivered feature implementations for the SaaS enablement team, including a REST endpoint for storage file downloads via AWI.
- Provided on-call customer support — troubleshooting and resolving production issues directly with customers.
- Conducted regular PR reviews across own and adjacent teams.
- Implemented features, bug fixes, and security vulnerability patches on the Automation Engine core.
- Authored and maintained E2E, regression, and Robot Framework tests; monitored nightly CI/CD runs.

Tech: Java 17 · REST · OSGI · Docker · Kubernetes · Robot Framework · Jenkins · GitHub · Google Gemini · Sonar · Grafana · Bazel · JFrog · Rally, Jira · Blackduck · qTest, PostgreSQL, Oracle, MySQL, Db2

Dodax

Software Developer

September 2021 - June 2022 (10 months)

Vienna, Austria

- * Involved in designing, Object-Oriented developing, unit testing, integration testing, releasing and maintaining the product
- * Optimized loading time of web pages referring to several million items and customers in service and vendor tools
- * Maintenance of services and jobs related to vendors, APIs, logistics, and orders
- * Increased the test coverage to 80% for the service tool application
- * Technologies used: Java 8/Java 11, Spring, Spring Boot, Hibernate/JPA, JSF 1&2, Angular, JUnit, REST, MySQL, MongoDB, PostgreSQL, Maven, Jenkins, AWS

Medizinische Universität Wien

Java Developer

August 2018 - August 2021 (3 years 1 month)

Vienna, Austria

- * Involved in developing, unit testing, bug fixing, and deployment of an image-based diagnosis software called "Octavo" using Eclipse RCP, Java, SWT, Swing, OpenGL, JUnit 4, Mockito, and SOAP
- * Adapted new kinds of scans to the product and built new features considering design patterns
- * Improved the product by fixing and refactoring 200+ bugs
- * Increased code coverage from 0 to more than 50% in a year
- * Documentation and code analysis using tools like Jira, Confluence, Bitbucket, GitLab, SonarLint, etc.

Tata Consultancy Services

System Engineer

September 2013 - July 2016 (2 years 11 months)

Bangalore, India

Project 1:

- * Customized an EXALEAD CloudView based search application
- * Imported data from different databases and ERP applications
- * Consolidated the data into one application allowing users to search, view, categorize the products and compare with similar products for having business insights and analytics

Project 2:

- * Involved in frontend and backend development of an Enovia application called PLM for the client (GE Health Care) using JavaEE, JavaScript, and HTML
- * Involved in bug fixing

Education

Odisha University of Technology and Research

Bachelor of Technology - BTech, Mechanical Engineering · (2009 - 2013)
